
Odd line 84 error.

Posted by journeyoftheanimals - 2008/05/11 18:01

Hello all. I am trying to setup the module but have one problem. I set it up as well as setting up phplists. Been when if you tr to enter new information to suscribe then you get this error.

Warning: phplist_subscribe(..wem/config/config.php) : failed to open stream: No such file or directory in /home/jota/public_html/modules/mod_jlord_phplistssubscriber/jlord_phplistssubscriber_underground.php on line 84

Fatal error: phplist_subscribe() : Failed opening required '../wem/config/config.php' (include_path='.:usr/lib/php:/usr/local/lib/php') in /home/jota/public_html/modules/mod_jlord_phplistssubscriber/jlord_phplistssubscriber_underground.php on line 84

I tried looking at line 84 in dreamweaver, but there is nothing on this line. How might I be able to fix this?

Hi,

That means that the module is not properly configured. The absolute path to your php list config is not the right one. Once you've inserted the right path it should work fine.

Thanks,

admin

Thank you greatly for your reply. I now have another error.

Error!Permission denied to call method XMLHttpRequest.open

I am too tired to try to fix it tonight so I thought I would reply here in opes that by morning someone will have a easy fix for this.

OK somehow I got back to the old error about line 84. For path to my phplist directory I put "http://journeyoftheanimals.com/wem" should I do that differently? Because that is the correct path to the phplist directory.

OK figured it out. Back to the Error!Permission denied to call method XMLHttpRequest.open error
