## Basic Configuration

Posted by admin - 2007/10/23 17:04

---

- PHPlist ID = ID for the MAIN list Id (in PHPlist) Where you want your users to subscribe to

-PHPlist Events List ID = ID for the second list (if required)  
(should call it "Second list" for the next release)

-Attribute ID = In order for you to insert the name of the subscriber you need to create what's known in phplist as an attribute. Here you insert the ID for that attribute

Make sure you also installed the component. In both extensions you need to insert the absolute path of your phplist installation

Hi- So I just installed the list and am getting redirected to a "page that does not exist". What did I do wrong?

Thanks!

I keep getting a 404 error when when submitting my registration details: /home/username/public\_html/mailing/

I also added this to the config file: `$phplist_path = '/home/username/public_html/mailing/';`

Did you ever get this to work. I get a 400 error also. I have tried everything I also made changes in the config file. I am using Joomla 1.5.3 in case that makes a difference

Hello,

I can't find the backend screen. Where can i see the Email-adresses?  
Do i have to install phplist serparetly so i can enter the PHPlist absolute Path?

Thanks Guy's

Hi,

You need to install PHPlist - That's correct - and that's where you'll be able to see all the email addresses.

Please read this info :[http://www.joomclub.com/joomla\\_tutorials/sample-configuration-of-our-joomla/phplist-extensions.html](http://www.joomclub.com/joomla_tutorials/sample-configuration-of-our-joomla/phplist-extensions.html)

Thanks,
