
"There was a problem retrieving data" error

Posted by jazzstage - 2007/11/02 05:01

I keep getting "There was a problem retrieving data"

I have the absolute path defined and the List, Event, Attributes ID's as well. Not sure what I'm missing.

Could you provide more information about your system configuration? and a url so we can test it?

Thanks,

IJE

http://www.joomclub.com/images/fbfiles/files/Component_Configuration.doc Sure, I am hosting it on siteground, and the url is <http://www.ewships.metavonix.com/>.

PHP Version 5.0.5

MYSQL Version 5.0.45-community-log

I am somewhat new to this so can you specify exactly what configuration information you're looking for?
