
Feature Request: Modified Login Module

Posted by psanjuan - 2008/04/23 09:23

Thank you for this nice extension. I am sure many Joomla and PHPlist users were pleased to know that there's a way to integrate the two wonderful open source products together. :)

I would like to suggest the following improvements:

- 1) A modified login module for your component to replace the original Joomla login module (or there is already a quick hack to modify the Joomla login itself? If it were the case, I hope you would give me a notice or instruction on how to do it)
- 2) On the PHPlist subscriber module to show the thank you message on the mainbody() instead on the module itself and for a confirmation email to be sent out to users (at least they have a formal record of the actual the subscription)

Thank you.
